

“We are Very Satisfied with it!”

Dr. Longhi on Biotage® Initiator+ Alstra™

October 2013, Milan, Italy

“We have been working with a Biotage Initiator+ Alstra since January 2013. During this period, the instrument has proved both efficient and robust, enabling us to successfully accomplish a substantial number of synthesis (more than 1,500 coupling cycles to date) differing in peptide sequence and size (up to 60 residues).

We have also evaluated the instrument’s performances using different solid supports and operating in different synthetic scales (50–250 µmol). Reagent and solvent delivery is very

precise, whilst synthetic protocols can be easily modified according to synthetic needs.

Whenever minor technical issues occurred, they were promptly solved by Biotage staff. Overall, the Biotage Initiator+ Alstra is in our opinion a very efficient and reliable instrument, and we are very satisfied with it!”

Dr. Renato Longhi
National Research Council of Italy, Milan
